dbConcert is a strong believer in the benefits that can be derived from Open Source Software

- Open Source Solutions have graduated from low level 'utilities'; eg. operating systems, application servers and databases to extend to key business areas such as:
  - Business Intelligence
  - CRM
  - Document management
  - Trading systems
- Open source benefits include:
  - Significantly minimize upfront costs and project risk
  - Eliminate software license fees
  - Commercial support now available if desired
